

ROGER EASTON, SR.

Innovator (1878 - 1930)

Easton, Ivan Getting (1912 - 2003), and Bradford Parkinson (1935 - Present) worked together at the U.S. Naval Research Laboratory. During the late 60's and early 70's, these scientists developed the idea of a tracking system that could use satellites in space to locate anything on Earth. Today, their Global Positioning System (GPS) allows pilots (and everyone else) to navigate much more safely and efficiently.
